Dear Readers

This summer was hectic regarding the CheckNano project. Exciting events and breakthroughs are coming as the end of our project time approaches. Some of it is highlighted in this newsletter.

We invite you to our final conference, and you can get the whole story.

Please share this newsletter with interested parties.

Yours sincerely,

Katharina on behalf of the CheckNano team

Invitation to our conference in Sønderborg

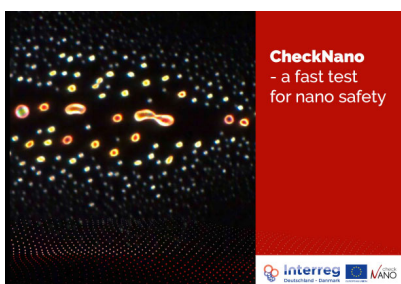

CheckNano: Nanoparticle detection also for plastics

We invite you to our final event that will introduce you to our path to detect very small nanoparticles and discriminate them from small nanoparticles. Our findings can be applied to silver nanoparticles, and can also be extended to other particles of concern like plastic nanoparticles.

Please join us on 8 October 2021 in Sønderborg.

Conference info

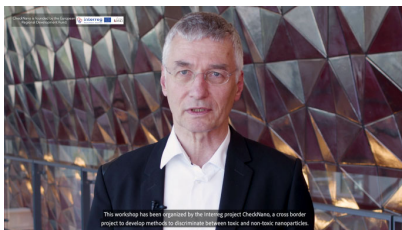

Our brochure is available online

It gives an overview in a format meant for non-specialists. It informs about the detection ways we investigated to distinguish between particles of different sizes by filtering techniques and optical detection. The applications are not restricted to silver nanoparticles.

Find it [here in English](#), more languages will follow soon.

The NIBS conference (nanotechnology and innovation in the Baltic Sea area) from 4-6 August offered three days of exchange between researchers and industry representatives on topics relevant to nanotechnology. A highlight for future businesses was the business development forum.

New film on sensors released

During our conference on 'Sensor technology for micro-and nanotechnology' we produced a short film summarising some of the findings.

You will find it [here](#) with subtitles available also in German and Danish.
